

October - Dedicated to Blessed Mother Mary and Respect for Life

Presently, all forms of human life are being attacked whether in-utero, disabled or diminished, and /or at the end-of-life. Human dignity is berated on all fronts. Gender identity and sexual orientation are the present craze. Polyamory awaits in the wings to be made into law. Gay surrogacy, (Men having Babies), selling babies and promoting child trafficking is big business both in the U.S. and in Europe. Transgenderism is mandated and promoted starting in kindergarten. 100 years ago, our Blessed Mother appeared to 3 children in Fatima to warn them of an upcoming second world war, if the human race did not return to the laws of morality instituted by God the Father on Mount Sinai, in antiquity.

On October 7th, one million Poles are expected to pray the rosary together around the borders of Poland. Their primary reason is *spiritual.... To save Poland and to save the whole world*, as the Mother of God did 100 years ago to rescue the world from sin!

Locally, in our state of Oregon, the last legislature introduced a bill to allow physician-assisted suicide for the mentally incompetent (SB494) and an euthanasia bill (SB893), which were defeated by thousands of telephone calls, e-mails and lobbying efforts by Oregon Right to Life. Yet HB 3391 was passed on the very last day of the legislative session, with an “emergency” clause,” which prevents a vote by the people to determine its acceptance, and only needed the signature by the governor to become law. This bill expands taxpayer funding for abortions by allocating 10 million dollars for ‘reproductive care’ for undocumented immigrants and paying the co-pay for all insurance companies for abortion for all nine months of pregnancy. This makes Oregon, the most liberal state concerning abortion.

The team of scientists at Oregon Health and Sciences (OHSU) have successfully created a genetically modified human embryo. This will be the first step in creating a ‘parental arms race’ in which people with resources scramble to create their vision of the “perfect baby,” with the eye color, intelligence, and other genetic traits they desire. Removal of ‘defective’ genes that cause inherited diseases will be their initial starting point. However, science never stops at “alleviating suffering.” Whole classes of people who were never envisioned initially for this experimentation will be become candidates for its promises..... Euthanasia started out as a treatment for ‘terminally ill,’ which has spread to ‘hopelessly ill,’ to those who are “*merely tired of living.*” The country of Iceland has eradicated the genetic-related condition of Downs Syndrome by simply aborting all Down children in-utero.

Donald Demarco in an article: *Abortion & Immigration*, stated that “*Abortion is a wall that prevents immigrating unborn children from entering the world.*” Nowhere in the world, is border security so tight. One million potential immigrants are killed each year in America.

In this month of October, WE MUST ALL PRAY DAILY TO AVOID THE MORAL CHAOS PREDICTED BY OUR BLESSED MOTHER!

Respect for Life Committee
